

Supplementary Table 1. Stochastic re-growth of aphidicolin-treated surviving cells. Exponentially growing cells were treated with aphidicolin 2.5 μ M for 3 weeks and re-incubated in drug-free media for 4 weeks. Results are expressed as number of wells where regrowth was observed over the total number of wells (48). Percentages are shown in brackets.

Week	1	2	3	1	2	3	4
				Regrowth (number of wells)			
Aph 2.5 μ M	Treatment			0/48 (0%)	5/48 (10.4 %)	9/48 (18.7 %)	14/48 (29.1 %)
